Please review the [Responsible Builder Policy](#) before submitting a ticket, the policy and submission details will help inform eligibility.

Note: If you're an advertiser, the Reddit Ads API doesn't require allowlisting or approval from Reddit to access. [Learn how to set it up.](#)

What do you need assistance with?

Data Access Request ▼

Your email address

yashp20223@gmail.com

Which role best describes your reason for requesting data access?

I'm a developer ▼

What is your inquiry?

I'm a developer and want to build a Reddit App that does not work in the Devvit ecosy...▼

Developers should go through Devvit first, you can find out more about Devvit [here](#). Only use

this form if your bot/app is not supported by Devvit.

Reddit account name

u/kamalaGeliGawala

What benefit/purpose will the bot/app have for Redditors?

This project will help identify common product feedback themes from public discussions in keyboard-related communities. The goal is to better understand user needs, recurring issues, feature requests, and sentiment trends.

The project is educational and non-commercial. Insights will be aggregated and used for learning product management, customer research, and AI-assisted analysis. No individual user profiling will be performed, and Reddit content will not be republished.

Provide a detailed description of what the Bot/App will be doing on the Reddit platform.

I am building a personal educational application that analyzes publicly available Reddit posts and comments related to mechanical keyboards.

The application will retrieve a limited number of posts and comments from selected keyboard-related communities using Reddit's API. The collected content will be processed to identify:

- Frequently reported user pain points
- Requested product features
- Customer sentiment trends
- Recurring discussion themes
- Product improvement opportunities

The application will generate aggregated summaries and visual dashboards for learning and portfolio purposes.

This project is non-commercial and intended to help me learn software development, AI-assisted analysis, and product management skills.

The application will not:

- Republish Reddit content
- Create user profiles
- Train foundation models
- Sell or share Reddit data
- Collect private information

Provide examples, the more detailed this description the more likely we will be able to assess your request.

What is missing from Devvit that prevents building on that platform?

This application performs external data analysis and AI-assisted insight generation outside the Reddit platform.

The project requires exporting public Reddit discussions into a Python-based analysis workflow that identifies customer pain points, feature requests, sentiment trends, and recurring themes. The results are presented in an external dashboard for educational and portfolio purposes.

Devvit is designed for applications that run within the Reddit ecosystem, while this project requires external data processing, analytics, and visualization capabilities that are not part of the Reddit user experience.

Therefore the application cannot be implemented solely within the Devvit environment.

Provide a link to source code or platform that will access the API.

Project currently in development. Source code repository will be created after API access

What subreddits do you intend to use the bot/app in?

r/Keychron

If applicable, what username will you be operating this bot/app under? (optional)

No dedicated bot account planned. API access will be used by my developer account for
